Dry ecological wall paint

What is dry, mineral wall paint?

A dry, water-soluble wall paint of the new generation combines the best properties of modern, high-quality emulsion paints (opacity, wet abrasion) and the traditional ecological clay and lime paints (emission free, no harmful chemicals).

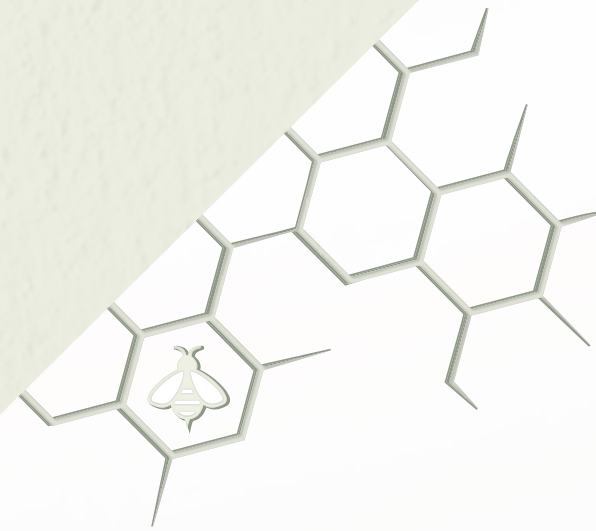

Best for?

Whether on plaster or plasterboard, in old or new buildings, in an office or at home - your health deserves an odourless, emission-free environment. The future needs progressive, ecological ideas. We bring you the solution. The warm white colour of FARNOVO and its decorative design options make a healthier interior possible.

Our priority
A healthy, modern interior.

Our inspiration
Nature.

Our goal
Sustainability.

The dry mineral wall paint of the new generation

Our company and our products are based on sustainability, innovation and quality of life.

These three pillars represent our fundamental goals and combine established technical knowledge and new innovative technologies in order to protect the nature and ensure a healthy home environment.

AIR: Just by transporting FARNOVO – our dry wall paint – we **save up to 60 % CO₂ emissions**. Furthermore, during the production of FARNOVO we consume **60 % LESS energy** compared to conventional products.

EARTH: With our optimized reusable mixing bucket concept, you can **reduce your plastic hazardous waste by up to 80 %**. In addition, FARNOVO is supplied in biodegradable paper bags.

WATER: With FARNOVO you optimize your water footprint and greatly reduce your „virtual water consumption“. At DPM Mashel, we use **0 % water** for our pre and post production processes.

PEOPLE: Our healthy, **pollutant-free** wall paint FARNOVO is **free of VOC emissions** and suitable for **allergy sufferers**. Mix only as much as you need and save time and money.

Farnovo in December 2020 gained accreditation as one of the 1000 most sustainable products in the world from the critically acclaimed Solar Impulse Foundation of Switzerland.

COMMITTED TO
THE FUTURE...
... BECAUSE WE
LOVE LIFE.

Improves the quality of life and saves time and money

- ✔ Smooth individual hue
- ✔ Non-drip mixing with the DPM mixer
- ✔ Professional-friendly application
- ✔ Consistent quality over many years
- ✔ High functionality (1 product - 3 applications)
- ✔ Mix fresh paint at home in just 5 minutes
- ✔ Mix only as much as you need

A healthy indoor climate with all the ecological advantages this brings

- ✔ Odourless and emission-free
- ✔ Breathable walls
- ✔ Free from harmful chemicals and preservatives
- ✔ Reduce plastic waste
- ✔ Suitable for allergy sufferers
- ✔ Child friendly

Modern, natural design

Natural earth tones and accents

The combination of FARNOVO and DECOTON fulfills unique, decorative design requirements. A variety of application techniques allows an almost unlimited and imaginative finished product.

Conventional tools and knowledge are used to create individual patterns. The simple dosage and mixing of the DECOTON color pigments give a designer additional freedom to realize his creative ideas.

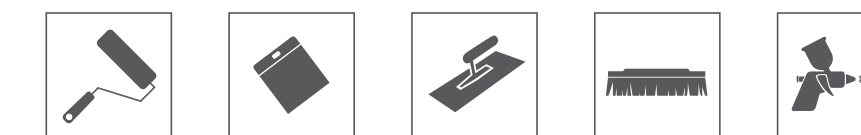

... this makes us unique!

With FARNOVO and DECOTON you use ONE ecological product for THREE areas of application: primer, paint and decorative fine plaster.

The unique, mineral composition brings extraordinary advantages in terms of design options, appearance and longevity of the colour. No-matter if you pigment the paint or use it as a natural white, you always enjoy the excellent properties of our products.

With FARNOVO we are jointly shaping the sustainable paint industry of the future with a clear focus on the environment, people and nature.

Possible applications

Rolling

Spatula

Spatula

Brushing

Spraying

Primary/base coat

5 kg FARNOVO + 5 l water
= approx. 8 l primer *
(approx. 70 m² with one coat)

Interior wall paint

5 kg FARNOVO + 3 l water
= approx. 5,5 l paint *
(approx. 40 m² with one finish coat **)

Decorative plaster/fine plaster

5 kg FARNOVO + 2,5 l water
= approx. 5 l filler *
(approx. 10 m² depending on the spatula technique)

* All information was measured under standard laboratory conditions.

** You will achieve the best colour result in combination with the FARNOVO white primer. In rare cases, with very uneven, coloured surfaces or non-absorbent surfaces, we recommend a second paint layer.
