

Installation instructions **AEROSANA® FLEECE**

Substrates

AEROSANA FLEECE can be used on subsurfaces that are slightly uneven and/or structured. To achieve airtight and/or windtight installation, it is important that AEROSANA FLEECE is coated with AEROSANA VISCONN or AEROSANA VISCONN FIBRE on both sides in the area where it is in contact with the subsurface. Recommendations for subsurfaces that AEROSANA VISCONN products can be used on can be found in the relevant application recommendations.

The information provided here is based on practical experience and the current state of knowledge. We reserve the right to make changes to the recommended designs and processing or to make alterations due to technical developments and associated improvements in the quality of our products. We would be happy to inform you of the current technical state of the art at the time you use our products.

Further information about the application and construction can be found in the pro clima planning documentation. For queries please call the pro clima technical hotline on +49 (0)6202 278245.
