

Moosfrei - Treatment against algae, moss, lichen and other green specimens – non-toxic –

Product description:

Moosfrei is a non-toxic product for the removal of moss, algae, lichens, and other green specimens, dirt of natural stones, paving stones, concrete, facades, plant containers, wood etc. with Moosfrei physically and chemically through a process of crystallization.

Moosfrei brightens stones, concrete and plaster and strengthens them.

Instructions for use:

Moosfrei is ready to use and does not need to be thinned. Moosfrei can be coated or sprayed with a sprayer. Moosfrei must be applied in dry weather. We recommend a onetime application followed by a drying time and exposure time of 4 days. It can then be rinsed off with water. Additionally, it is advisable to swipe away or brush away dead moss. For stubborn infestation of green specimens, treatment should be repeated. It is advisable to test the product at an appropriate place in order to avoid undesired reaction.

Application:

1L Moosfrei is sufficient for approx 10m²

Protective measures

Use of protective gloves and goggles is recommended during processing due to the alkalinity (like some soap or soda products). (After drying Moosfrei is neutral!) If it accidentally comes into contact with eyes, rinse immediately with plenty of water and consult a doctor if necessary.

If Moosfrei comes into contact with the skin, immediately wash it with water and apply cream.

Cleaning

Immediately clean equipment and items that come into contact with Moosfrei with water. Keep container tightly closed after use to prevent drying. Moosfrei has unlimited storage regardless of the ambient temperature.

Disposal

Moosfrei can be disposed of as normal domestic waste.
